

Epoxy Putty & Gaffa Tape Kayak Kit

Gaffa Tape Repair

Gaffa tape is an excellent temporary, waterproof repair for kayaks and kit. It can be used to seal a small split or hole on dry plastic or composite kayaks, or to patch a ripped bag. It will stick to and seal most surfaces, provided they are dry.

Caution

This repair can be easily damaged if scraped or caught; treat it with care, especially when launching, landing or rock-hopping.

Epoxy Putty Repair

Use epoxy putty to make small, effective and watertight repairs to the majority of composite or plastic (polyethylene) types of canoe or kayaks, on or off the water. Once the epoxy putty is mixed, it will set underwater.

- 1 Remove the plastic and silver foil packaging.
- 2 Wear gloves.
- 3 Mix together until a uniform colour.
- 4 Push into hole/split to “key” into the edges.

For a quicker but more temporary alternative, use Surf Wax or Void Filler.
